CNSO2AGC 1129 bp DNA linear GSS 12-MAY-2000 Tetraodon nigroviridis genome survey sequence PUC-Ori end of clone 251L09 of library G from Tetraodon nigroviridis, genomic survey
                                                                                                                                           Direct Submission
Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage :
BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web: www.genoscope.cns.fr)
Determination of this BAC-end sequence was carried out as part of a collaboration with the Buropean Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota; Métazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Actinopterygii; Neopterygii; Teleostei; Buteleostei; Neoteleostei; Acanthomorpha; Acanthopterygii; Percomorpha; Tetraodontiformes; Tetraodontidae; Tetraodon. 1 (bases 1 to 1129)

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ehi.ac.uk. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                              Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                  ö
                                                  The present sequence is S. griseus Ssgh protein. Ssgh reduces branching and fragment septation and enhances fragmentation of mycellum in liquid culture resulting in lower viscosity of culture broths. Filamentous bacteria can be transformed with ssgh gene-containing plasmid to enhance the production of secondary metabolites such as, antibiotics, antitumour agents, immunosuppressive agents, hypocholesterolaemic agents, enzyme funhibitors, antimigraine agents, herbicides, antiparasitic agents, ruminant growth promoters, bioinsecticides, receptor agonists and antagonists and biomass.
                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    VHIGPTEPEGLGDVHIRLQVGADRALFRAGTAPLVAFLDRTDKLVPLGQEHTLGDFDGNL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
The present sequence is S. netropsis SsgA protein. SsgA reduces branching and fragment septation and enhances fragmentation of mycel in liquid culture resulting in lower viscosity of culture broths. Filamentous bacteria can be transformed with ssgA gene-containing plasmid to enhance the production of secondary metabolites such as, antibiotics, antitumour agents, immunosuppressive agents, hypocholesterolaemic agents, enzyme inhibitors, antimigraine agents, berbicides, antiparastic agents, ruminant growth promoters, bioinsecticides, receptor agonists and antagonists and biomass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present sequence is S. goldeniensis SsgA protein. SsgA reduces branching and fragment septation and enhances fragmentation of mycelium in liquid culture resulting in lower viscosity of culture broths. Filamentous bacteria can be transformed with ssgA gene-containing plasmid to enhance the production of secondary metabolites such as, antibiotics, antitumour agents, immunosuppressive agents, hypocholesterolaemic agents, enzyme inhibitors, antimigraine agents, herbicides, antiparasitic agents.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.

           diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

by administering an agent that: (a) modulates DPC4 expression, by administering an agent that: (a) modulates DPC4 expression, by according an agent that: (a) modulates DPC4 expression, specifically a sense DPC4 sequence (particularly in the form of a vector, i.e. by gene therapy), but also an antisense sequence where DPC4 protein is over expressed or (b) minics the activity of DPC4. DPC4 presence dabsence of human chromosome 1861.1 fragments. When a homozygous deletion is detected in this region, an agent can be administered that accumulates within, or kills, only cells which contain such a deletion. This agent exploits the absence of an enzyme deletion, i.e. it has a highly selective action.
 (in vivo or in vitro) proliferative diseases, especially pancreatic carcinoma, bile duct, bladder or colorectal cancer, Crohn's disease, colitis-associated neoplasia or chronic ulcerative colitis. These conditions, where associated with a homozygous deletion, can be treated
                                                                                                                                                                                                                                                                                                                           -----ELRYEVGDPYAIRMTFHLPGDAPVTWAFGRELLL 49

                                                                                                                                                                                                                                                     6
                      using a chimeric Dpc4 (Deleted in Pancratic Carcinoma, locus 4) polypeptide coupled to a nuclear localisation factor. Upon localisation to the nucleus and binding to Smad-binding element (SBB), Dpc4 shows tumour suppressor action. This method can also be used for identifying transforming growth factor beta (TGF beta) inducible genes, modulators of Dpc4 nuclear localisation and in screening for anti-cancer drugs. Dpc4 can be used in the treatment of neoplasms and in gene therapy. The present sequence is that of human Dpc4 tumour suppressor protein. Note: It is indicated in the claims section that the present peptide sequence is sequence Id No: 1 and elsewhere in the specification as

proteins (such as bone morphogenetic protein (BMP), activin and TGF-betas themselves) phosphorylate Smad proteins, which then home or ref-betas themselves) phosphorylate Smad proteins, which then home or transcription. Smad4 (also known as MADH4 and DPC4) is a shared heterodimerisation partner for the pathway restricted members of the Smad4 family (Smad1-3, 5 and MADH6) and is known as the common mediator. The N-terminus of Smad4 promotes the binding of the Smad complex to DNA, and the C-terminus provides an activation signal required for the complex to stimulate transcription. The invention relates to antisense complex to stimulate transcription. The invention relates to antisense complex to stimulate to the human Smad4 gene, which inhibit its expression. A series of oligonucleotides (AAZ59749-2598) were designed to trajet different regions of the human Smad4 RNA, and were analysed for their effect on Smad4 mRNA levels by quantitative real-time PCR. The oligonucleotides of the invention are useful for diagnosis, prevention and treatment of conditions associated with Smad4 expression, such as tumour formation, inflammation and certain infections.

                                      The present sequence represents a human Smad4-green flourescent protein fusion product. The fusion protein is used in an assay that exemplifies the invention. The specification describes how quantitative information about the influence of a molecule on a cellular response is obtained by recording the variation, caused by the molecule, on mechanically intact living cells, in the spatially distributed light emitted from a luminophore present in the cells. The variation in light emission is processed to provide information that correlates spatial distribution to the degree of the molecule. The method is used to identify agents that (in)directly affect intracellular signalling, especially to screen for potential therapeutic agents or toxins, and to identify new drug targets.
                                                                                                                                                                                                                                                                                            304 vhnelafqppisnhpapeywcsiayfemdvqvge-----tfkvpsscpi-----vtv 350

                                                 The present sequence represents a human Smad4-green flourescent protein fusion product. The fusion protein is used in an assay that exemplifies the invention. The specification describes how quantitative information about the influence of a molecule on a cellular response is obtained by recording the variation, caused by the molecule, on mechanically intact living cells, in the spatially distributed light emitted from a luminophore present in the cells. The variation in light emission is processed to provide information that correlates spatial distribution to the degree of the molecule. The method is used to identify agents that (in)directly affect intracellular signalling, especially to screen for potential therapeutic agents or toxins, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents Vibrio furnissii periplasmic chitodextrinase findo-in which is a encoded by the endI gene. Chitin is a homopolymer of beta 1-4 N-acctylglucosamine (GLONAc). Chitin degradation by V. furnissii involves several signal transducing systems and a multitude of proteins.
                                                                                                                                                                                                                                                                                                                                                                         Chitodextrinase; periplasmic; endI; Endo-I; chitin; chitosan; endoenzyme;

        Periplasmic chitodextrinase (AAW02156), periplasmic Beta-N-acetylglucosaminidase (AAW02157) and aryl Beta-N-acetylglucosaminidase (AAW02158) can be used to produce chitin Oligosaccharides with the structure (GIONAc)n where n is 2 or higher, by contacting them with soluble chitin. The enzymes are encoded by the genes end!, exoI and exoII respectively. They are all genes involved in the catabolic pathway of chitin.

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by particular proteins include SAPHO syndrome (synovitis, acne, practicular). Hypertosis and osteomyelitis), uveltis and endophthalmitis. The particular presence or absolved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies contacting the capterision and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as therefore treat P. acnes infections. The antibodies may also be used as chagnostic agents for determining P. acnes presence, for example, by contame linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed printed in the printed in electronic format directly from WIPO at the print of the printed and the printed printed printed in electronic format directly from WIPO at the printed and the printed print
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        at ftp.wipo.int/pub/published_pct_sequences

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                        ......FDGNLEDALGRILAEEQNAG 135

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the TGF-beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sylear

Sylear

Sylear

Sylear tenance names: tumor supressor DPC4

C; Species: Homo sapiens (man)

C; Species: Homo sapiens (man)

C; Date: 12-Feb-1998 #sequence_revision 13-Mar-1998 #text_change 10-Dec-1999

C; Accession: S71811

R; Zhang, Y; Feng, X.H.; Wu, R.Y.; Derynck, R.

Nature 383, 168-172, 1996

A; Title: Receptor-associated Mad homologues synergize as effectors of the TGF-be

A; Reference number: S71891

A; Reference number: S71891

A; Accession: S71811

A; Status: not compared with conceptual translation

A; Molecule type: mRNA

A; Residues: 1-552 czMA

C; Superfamily: human transcription regulator MAD-4

C; Keywords: transcription regulation

Mol. Microbiol. 5, 1221-1233, 1991
A;Fitle: Nucleotide sequence of the endoglucanase C gene (cenC) of Cellulomonas fimi, A;Reference number: S15271; MUID:92065819
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    E91295
peptide chain release factor RF-3 [imported] - Escherichia coli (strain O157:H7, subs C;Species: Escherichia coli (C;Species: Escherichia coli (C;Date: 18-Jul-2001 #sequence_revision 18-Jul-2001 #text_change 18-Jul-2001
A; Title: Identification of an abundant S-thiolated rat liver protein as carbonic anhy A; Reference number: $13896; MUD: 9112820
A; Accession: $13896
A; Status: preliminary
A; Molecule type: protein
A; Residues: $25, X', 27-34, 38, 'T', 40-42, 'XX', 45-46, 'S', 48-51, 'X', 53-56, 'RVV', 74, 'XXTFX'
C; Superfamily: carbonate dehydratase; carbonic anhydrase homology
C; Reywords: blocked amino end; carbon-oxygen lyase; hydro-lyase
F; 5-259/Domain: carbonic anhydrase homology <CAH>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A; Molecule type: DNA

SIMILARITY: BELONGS TO CELLULASE FAMILY E (FAMILY 9 OF GLYCOSYL HYDROLASES).
SIMILARITY: CONTAINS 2 CELLULOSE-BINDING DOMAIN (CBD) REMOTELY RELATED TO BACTERIAL-TYPE CBD'S.
SIMILARITY: CONTAINS 2 IMMUNOGLOBULIN-LIKE DOMAINS.
